

Edge D-Arm Lanyard

Finally a solution for illegal detachers!

Edge D-Arm Lanyard tag may look like an ordinary EAS tag, but it has a surprise for would-be thieves: it will alarm if removed with just a magnetic detacher.

The tag first needs to be passed over a deactivator pad at the point of sale to turn the technology off, and then removed with a magnetic detacher - something that is very easy for your store associates, but difficult for shoplifters.

No additional training or equipment is needed for your employees as the Edge D-Arm Lanyard tag works with your existing detachers and deactivators.

For added deterrence, the tag features a blinking LED light, and a loud 95 dB alarm will sound if the tag is compromised in any way.

KEY FEATURES
